Architecting Secure Software Systems Asoke K. Talukder, Manish Chaitanya

Traditionally, software engineers have defined security as a non-functional requirement. As such, all too often it is only considered as an afterthought, making software applications and services vulnerable to attacks. With the phenomenal growth in cybercrime, it has become imperative that security be an integral part of software engineering so that all software assets are protected and safe. **Architecting Secure Software Systems** defines how security should be incorporated into basic software engineering at the requirement analysis phase, continuing this sharp focus into security design, secured programming, security testing, and secured deployment.

Outlines Protection Protocols for Numerous Applications

Through the use of examples, this volume defines a myriad of security vulnerabilities and their resultant threats. It details how to do a security requirement analysis and outlines the security development lifecycle. The authors examine security architectures and threat countermeasures for UNIX, .NET, Java, mobile, and Web environments. Finally, they explore the security of telecommunications and other distributed services through Service Oriented Architecture (SOA). The book employs a versatile multi-platform approach that allows users to seamlessly integrate the material into their own programming paradigm regardless of their individual programming backgrounds. The text also provides real-world code snippets for experimentation.

Define a Security Methodology from the Initial Phase of Development

Almost all assets in our lives have a virtual presence and the convergence of computer information and telecommunications makes these assets accessible to everyone in the world. This volume enables developers, engineers, and architects to approach security in a holistic fashion at the beginning of the software development lifecycle. By securing these systems from the project's inception, the monetary and personal privacy catastrophes caused by weak systems can potentially be avoided.

From reader reviews:

Sally Oneal:

The book Architecting Secure Software Systems gives you the sense of being enjoy for your spare time. You can use to make your capable a lot more increase. Book can to become your best friend when you getting pressure or having big problem with the subject. If you can make studying a book Architecting Secure Software Systems to be your habit, you can get considerably more advantages, like add your own capable, increase your knowledge about many or all subjects. You can know everything if you like open up and read a reserve Architecting Secure Software Systems. Kinds of book are a lot of. It means that, science publication or encyclopedia or some others. So , how do you think about this book?

Eileen Lopez:

Book is to be different for every single grade. Book for children until finally adult are different content. As it is known to us that book is very important for all of us. The book Architecting Secure Software Systems ended up being making you to know about other knowledge and of course you can take more information. It is extremely advantages for you. The e-book Architecting Secure Software Systems is not only giving you a lot more new information but also to become your friend when you feel bored. You can spend your own spend time to read your guide. Try to make relationship using the book Architecting Secure Software Systems. You never truly feel lose out for everything in case you read some books.

Hae Hughes:

In this 21st century, people become competitive in every way. By being competitive now, people have do something to make all of them survives, being in the middle of the particular crowded place and notice by simply surrounding. One thing that often many people have underestimated the item for a while is reading. Yeah, by reading a guide your ability to survive enhance then having chance to stay than other is high. For yourself who want to start reading a book, we give you this Architecting Secure Software Systems book as starter and daily reading book. Why, because this book is greater than just a book.

Allie Littlefield:

Reading a book being new life style in this calendar year; every people loves to go through a book. When you read a book you can get a great deal of benefit. When you read guides, you can improve your knowledge, mainly because book has a lot of information into it. The information that you will get depend on what types of book that you have read. If you want to get information about your study, you can read education books, but if you act like you want to entertain yourself you are able to a fiction books, these kinds of us novel, comics, as well as soon. The Architecting Secure Software Systems will give you new experience in looking at a book.
