Chromatography for the Analysis of Lipids Eugene W. Hammond

Chromatography for the Analysis of Lipids focuses on the three main chromatographic techniques for analyzing lipids: thin layer (TLC), gas liquid (GLC), and high performance liquid chromatography (HPLC). It also covers supercritical fluid chromatography (SFC). Applications for each chromatographic technique are discussed with emphasis on their quantitative aspects and suitability for use, and variations in technique are covered in detail. Figures are used throughout the book to illustrate typical results, which shows end points that can be compared in your own laboratory. This important technical book will be an excellent workbench companion for chromatographers, food scientists, lipid chemists, analytical chemists, and others who use chromatographic techniques for lipid analysis.
