## **New Theories and Predictions on Ozone Hole and Climate Change** Qing-Bin Lu

This monograph reviews the establishment of new theories of the ozone hole and global climate change, two major scientific problems of global concern. It provides a comprehensive overview of the author's work including significant discoveries and pioneering contributions, such as the discovery of extremely effective dissociative electron transfer reactions of chlorofluorocarbons (CFCs) adsorbed on ice surfaces and its implications for atmospheric ozone depletion; the proposal of the cosmic-ray-driven electron-induced-reaction (CRE) theory for the ozone hole; the predictions of 11-year cyclic variations in polar ozone loss and stratospheric cooling; the discovery of the nearly perfect linear correlation between CFCs and global surface temperature; the proposal of the CFC theory for modern global warming; the discovery of greenhouse-gas-specific climate sensitivity and the parameter-free calculation of global surface temperature change caused by CFCs; the prediction of global cooling; and so on.

Unlike conventional atmospheric and climate models, the author's theoretical models were established on robust observed data rather than computer simulations with multiple parameters. The new theories have shown the best agreements with the observed data within 10% uncertainties. This book highlights the scientific understandings of the world-concerned problems from the unique point of view of a physicist who seeks theories with great simplicity and superior predictive capacity.

This book is self-contained and unified in presentation. It may be used as an advanced book by graduate students and even ambitious undergraduates in physics, chemistry, environmental and climate sciences. It is also suitable for non-expert readers and policy makers who wish to have an overview of the sciences behind atmospheric ozone depletion and global climate change.

Readership: Graduate students in climate science, non-experts and policy makers who wish to have an overview of the sciences behind ozone depletion and global climate change.

### **From reader reviews:**

#### **Terrence Kimball:**

The book *New Theories and Predictions on Ozone Hole and Climate Change* make you feel enjoy for your spare time. You should use to make your capable far more increase. Book can to get your best friend when you getting anxiety or having big problem with the subject. If you can make looking at a book *New Theories and Predictions on Ozone Hole and Climate Change* being your habit, you can get a lot more advantages, like add your current capable, increase your knowledge about many or all subjects. It is possible to know everything if you like open and read a book *New Theories and Predictions on Ozone Hole and Climate Change*. Kinds of book are a lot of. It means that, science book or encyclopedia or some others. So , how do you think about this guide?

#### **Ana Gaskill:**

This *New Theories and Predictions on Ozone Hole and Climate Change* book is just not ordinary book, you have it then the world is in your hands. The benefit you will get by reading this book is definitely information inside this publication incredible fresh, you will get details which is getting deeper you actually read a lot of information you will get. This *New Theories and Predictions on Ozone Hole and Climate Change* without we comprehend teach the one who studying it become critical in contemplating and analyzing. Don't always be worry *New Theories and Predictions on Ozone Hole and Climate Change* can bring if you are and not make your case space or bookshelves' turn into full because you can have it in the lovely laptop even telephone. This *New Theories and Predictions on Ozone Hole and Climate Change* having excellent arrangement in word and layout, so you will not feel uninterested in reading.

#### **Lola Hernandez:**

Reading can called mind hangout, why? Because when you find yourself reading a book mainly book entitled *New Theories and Predictions on Ozone Hole and Climate Change* your brain will drift away trough every dimension, wandering in each and every aspect that maybe unknown for but surely might be your mind friends. Imaging just about every word written in a guide then become one web form conclusion and explanation that maybe you never get prior to. The *New Theories and Predictions on Ozone Hole and Climate Change* giving you yet another experience more than blown away your thoughts but also giving you useful facts for your better life within this era. So now let us teach you the relaxing pattern the following is your body and mind are going to be pleased when you are finished reading through it, like winning a. Do you want to try this extraordinary spending spare time activity?

#### **Bernard Taylor:**

A lot of e-book has printed but it differs from the others. You can get it by world wide web on social media. You can choose the best book for you, science, witty, novel, or whatever by searching from it. It is referred to as of book *New Theories and Predictions on Ozone Hole and Climate Change*. You can include you

knowledge by it. Without causing the printed book, it could possibly add your knowledge and make a person happier to read. It is most important that, you must aware about reserve. It can bring you from one place to other place.
