Lars Dibbern

Drones as a Service: DaaS: Strategy, technical concepts and legal aspects Lars Dibbern

Imagine that you do not just want to start a single drone in order to perform a single mission. Instead you want to offer a service that operates a variety of types and numbers of unmanned aerial vehicles (UAVs). The objective is to provide a choice of different shared services based on single UAVs as well as on UAV swarms. In order to establish such a „Drones as a Service“ (DaaS) concept, several different technologies and processes have to be integrated into an IT service provision. This book's intention is to shed a light from different angles on this matter. Among these angles are drone technology, network security, video streaming and infrastructure as well as the processes that are required to operate fleets of UAVs.
