Immunology / Immunotherapy: a 62,000 word, 280 page, document concerning healing the body of sickness through the body Immune System.

Immunology, in association with biomedical science is the science that deals primarily with the immune system and the cell-mediated and humoral aspects of immunity and immune responses; relating to or being the part of immunity or the immune response that involves antibodies secreted by B-cells, T-cells and Nk cells and circulating in bodily fluids.

Immunotherapy is defined as the treatment that uses the body's own immune system to fight disease. It is the treatment of sickness by enhancing, or suppressing an immune response.

My blood boils way beyond anger when many people's lives are being ruined by the health care system; either by a pharmaceutical drugs or a medical procedure that went awry and has damaged them beyond repair by a lack of proper information about their treatment options.

And they all say the same thing:

"If only I had known sooner!"

By following the suggestions and information in this book I trust that you will never be among the ranks that hear yourself say these words.

Why is it that some people sail effortlessly into old age in full possession of all their faculties and bodily functions with a razor-sharp mind and the vitality of someone half their age; retaining their independence and their zest for life? While others merely spiral into long term decline, chronic illness and medical drug dependency; their quality of life dwindling day by day as they become an ever bigger burden on their families? Could the difference be a healthy immune system?

What is it that we do right or what is it that we do wrong? It can be either right or wrong but more than likely it is what we don't do at all and this is to consciously guard our health through a healthy immune system.

Ultimately the state of our health is in our own hands. We are all eager to understand what makes us healthy and to do the things we need to do to preserve or restore our health. At least this is our intention but somehow we can get sidetracked as if we just made a New Year Resolution all the time knowing that we are going to break it.

It is known that the key to good health is a strong and fully functioning immune system. When our immune system is healthy and strong there is no way that disease can set into the body. Scientists, at the cutting edge of Naturopathic Medicine, are constantly searching for safe and effective natural immune system boosters that will maximize our body's ability to fight disease.

Without our immune system, our body would soon succumb to all sorts of harmful bacteria, viruses,

parasites, and other invaders. It acts as a radar screen and is constantly scanning the body for antigens. When antigens are targeted, specialized immune cells quickly respond to ward off these potential health threats and regain a normal healthy status.

Our immune systems aren't infallible and there are numerous risk factors, including, pollution, stress, poor diet, medicinal drugs and environmental toxins that place a huge burden on our bodies, causing overload, and weakening them. It's hardly surprising given all these culprits that colds, flu, infection, and disease are so rife.

The information in this report will provide the tools needed to help strengthen the immune function so we can become as invulnerable as possible to the health hazards we know about and to new threats we can hardly imagine.

We fully know that some of these so-called health threats are made up by the Pharmaceuticals in order to sell a recent manufactured drug through fear and scare tactics that will cause us to run to our nearest pharmacy to buy the drug to eliminate contacting a harassing disease that really doesn't exist. At the same time, know that there are outbreaks of severe epidemics.

The solution is: concentrating on keeping our immune system in top working order.

Enjoy
