Physics of Magnetic Nanostructures

Frank J. Owens

Physics of Magnetic Nanostructures Frank J. Owens

A comprehensive coverage of the physical properties and real-world applications of magnetic nanostructures

This book discusses how the important properties of materials such as the cohesive energy, and the electronic and vibrational structures are affected when materials have at least one length in the nanometer range. The author uses relatively simple models of the solid state to explain why these changes in the size and dimension in the nanometer regime occur. The text also reviews the physics of magnetism and experimental methods of measuring magnetic properties necessary to understanding how nanosizing affects magnetism. Various kinds of magnetic structures are presented by the author in order to explain how nanosizing influences their magnetic properties. The book also presents potential and actual applications of nanomaterials in the fields of medicine and computer data storage.

"Physics of Magnetic Nanostructures" Covers the magnetism in carbon and boron nitride nanostructures, bulk nanostructured magnetic materials, nanostructured magnetic semiconductors, and the fabrication of magnetic nanostructures Discusses emerging applications of nanomaterials such as targeted delivery of drugs, enhancement of images in MRI, ferrofluids, and magnetic computer data storage Includes end-of-chapter exercises and five appendices

"Physics of Magnetic Nanostructures" is written for senior undergraduate and graduate students in physics and nanotechnology, material scientists, chemists, and physicists.

From reader reviews:

Carolyn Hoffman:

What do you think about book? It is just for students since they're still students or the item for all people in the world, exactly what the best subject for that? Only you can be answered for that concern above. Every person has different personality and hobby for every other. Don't to be pushed someone or something that they don't desire do that. You must know how great and also important the book Physics of Magnetic Nanostructures. All type of book is it possible to see on many sources. You can look for the internet solutions or other social media.

Jessica Nakagawa:

Reading a publication can be one of a lot of pastime that everyone in the world likes. Do you like reading book so. There are a lot of reasons why people like it. First reading a reserve will give you a lot of new info. When you read a guide you will get new information due to the fact book is one of many ways to share the information or even their idea. Second, looking at a book will make you more imaginative. When you examining a book especially fictional book the author will bring that you imagine the story how the figures do it anything. Third, it is possible to share your knowledge to other folks. When you read this Physics of Magnetic Nanostructures, you could tells your family, friends in addition to soon about yours reserve. Your knowledge can inspire the mediocre, make them reading a publication.

Larry Jones:

Spent a free time for you to be fun activity to accomplish! A lot of people spent their sparetime with their family, or all their friends. Usually they undertaking activity like watching television, gonna beach, or picnic in the park. They actually doing same every week. Do you feel it? Do you need to something different to fill your own personal free time/ holiday? Can be reading a book can be option to fill your cost-free time/ holiday. The first thing that you'll ask may be what kinds of e-book that you should read. If you want to attempt look for book, may be the guide untitled Physics of Magnetic Nanostructures can be good book to read. May be it is usually best activity to you.

Nancy Lundy:

Many people spending their period by playing outside having friends, fun activity along with family or just watching TV the entire day. You can have new activity to spend your whole day by looking at a book. Ugh, do you consider reading a book really can hard because you have to take the book everywhere? It alright you can have the e-book, delivering everywhere you want in your Cell phone. Like Physics of Magnetic Nanostructures which is having the e-book version. So , why not try out this book? Let's observe.
